

Gosa Bogdan

Software developer

About me

Passionate and enthusiastic Front-end Developer, with 2+ years of experience in web development. I developed dozens of projects over the years, from a snake game in C++ to a full web application.

Projects

Think-Up Platform (in progress)

Me and a team of very talented students developed a platform for Think-Up Academy. It was a very complex project in which I learnt a lot. This project includes authentication, working with and creating an API and a lot of teamwork. While being only 2 people on the front-end I did a vast majority of the interface.

Next Js | Auth0 | CSS | API | AWS | Framer-Motion

Weather App

I created a website that displays the data from OpenWeather API, thus you can see the weather from your location, it even shows it from 3 to 3 hours. In this project I learnt React JS and working with an API.

React Js | CSS | OpenWeather API

DC-Supplier

In this project me and Vana Marc had to develop a website for a company. This was my first paid project, although it's not a very complicated one it was for a real company. Here I also created some carousels with Swiper JS.

CSS | Bootstrap | Swiper JS
