

# Gosa Bogdan

Software developer

## About me

Passionate and enthusiastic Front-end Developer, always looking for opportunities to learn something new or improve on, eager on working with you on your projects.

## Projects

### Think-Up Platform (in progress)

My team and I developed a platform for an NGO. The platform is intended to host the projects built by the academy's students, while also allowing mentors to provide feedback to the student. I had to implement an authentication system using auth0 and integrate it inside the Next Js framework. Also me and the team had to create a REST api that covers all CRUD operation, saving the data into dynamodb and S3 for files and images

Next Js | Auth0 | CSS | API | AWS | Framer-Motion

### Weather App

I created a website that displays the data from OpenWeather API, thus you can see the weather from your location, it even shows it from 3 to 3 hours. In this project I learnt React JS and working with an API.

React Js | CSS | OpenWeather API

### UNMEELANA

I developed a presentational website for an artist. Here I had to create some custom animations using GSAP. It's a simple and artistic project

HTML | CSS | JavaScript | GSAP

## Details

### Website
